

# A smarter way to sign your document

Sign and certify documents securely from desktop or any other device without complex setups or data sharing. Protect your data with advanced signature encryption and verification.

Digital signature tools save time, but can be a security blindspot. Powered by the Dedoco Trust Engine, dSign is for businesses who understand the value and the risk of digital document journeys. Built on Web3, **dSign** enables true ownership of your documents and digital assets via verified sharing, tokenization and smart contracts, facilitating regulatory compliance and adherence to document residency requirements, all while delivering productivity and efficiencies to customers.

## Features & Benefits

### Next-gen technology

Decentralised platform with open architecture to protect data privacy and security

### Regulatory compliance

Flexibility to leverage customers' own document repository, enabling complete regulatory compliance

### Secure e-Signature Capture

Signatures are hashed along with document data, making them tamper-proof

### Legal Evidence

Documents are time-stamped on blockchain, providing legally-binding evidence

### Identity Provider (IdP) Integration

Integrates national and private identity providers, such as Singapore Government SingPass

### Verifiable Audit Trail

All users can instantly verify documents and retrieve complete document history to support audits

### Robust authentication

Authenticate users via email, phone or ID partners

### Signing Options

Draw, type or upload anytime, anywhere on any device. Over 80% time savings vs paper-based systems!

### Convenience

Integrates seamlessly with your existing suite of enterprise apps, with your branding

## Dedoco Trust Engine

Dedoco's suite of products lays the foundation to enable organisations to build trust and credibility in their processes. With our Next-Gen Enterprise Trust, you can **Trust, Trace and Verify** every document and record.

### Infrastructure

Resilient Web3 infrastructure where tamper-proofing of documents ensures authenticity.

### Hashcheck

A document hash is registered for every document & change. Verify your documents and records with complete transparency using Hashcheck.

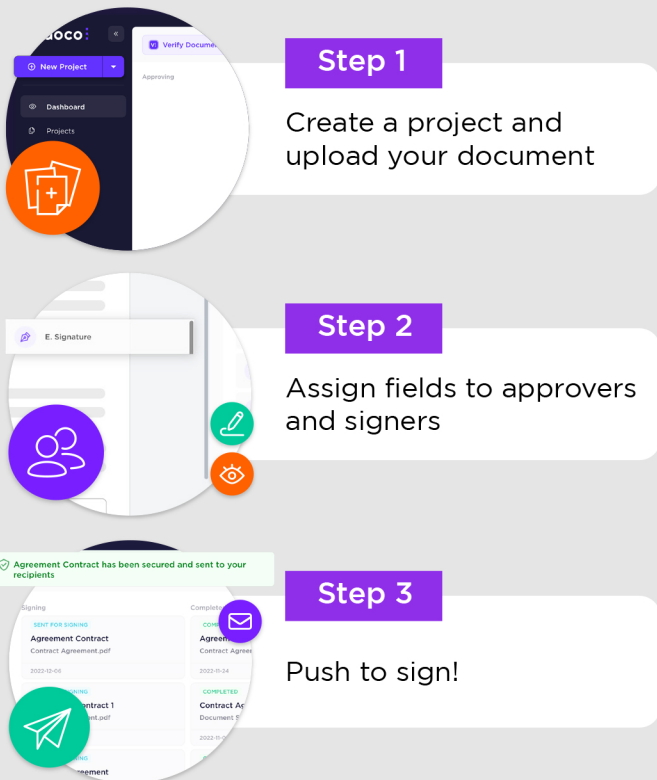

### Verification

Chain of custody of a document is tracked real-time and can be instantly verified using Dedoco's audit trail

## Extensive Application

**dSign** allows you to legally bind signatures to execute contracts and agreements, as well as approve, hire, sell and transfer with ease. Use dSign to sign across global boundaries within minutes; conveniently and securely.

## Have you dSign-ed yet?

*"I've seen that the team at Dedoco has brought the business of digital signing out of the dark ages with their smart document technology. Now as a Microsoft partner they have tapped into the most powerful ecosystem on the globe to bring their clients an incredible eSigning experience"*

 **James Croyle**  
Microsoft Partner Dev.Manager, Microsoft

*"Today's digital economy necessitates more flexible and secure solutions that can benefit everyone - from enterprises to individuals. GovTech is delighted to partner Dedoco, to provide secure and convenient digital signing capabilities for all Singpass users."*

 **Kwok Quek Sin**  
Senior Director, Govtech Singapore
